Imboden, Joel R. Gat, 2012-12-06 A lake as a body of water is in continuous interaction with the rocks and soils in its drainage basin, the atmosphere and surface and groundwaters. Human industrial and agricultural activities introduce new inputs and processes into lake systems. This volume is a selection of ten contributions dealing with diverse aspects of lake systems, including such subjects as the geological controls of lake basins and their histories, mixing and circulation patterns in lakes, gaseous exchange between the water and atmosphere, and human input to lakes through atmospheric precipitation and surficial runoff. This work was written with a dual goal in mind: to serve as a textbook and to provide professionals with in-depth expositions and discussions of the more important aspects of lake systems.

The Global Climate John T. Houghton, 1985-09-05 Now in paperback, this book has succeeded in its aim to introduce the global climate problem and the complex processes and interactions which play a part in climatic change to a wide range of scientists working in climatic research or the related fields of meteorology, oceanography, glaciology, and hydrology. It is centred around the World Climate Research Programme, an international enterprise jointly sponsored by the scientific community through the International Council of Scientific Unions and the national weather centres through the World Meteorological Organisation. If progress is to be made in understanding climatic change, it is necessary to observe and understand all components of the climate system and the interactions between them. This book is particularly relevant to many contemporary climatic problems and to the two most important questions arising from them: to what extent can changes in climate be predicted, and what is the extent of man's influence on climate. *The Global Climate* answers these questions, showing how the important processes may be observed, evaluated, and modelled by computer.
