Independent Component Analysis of Edge Information for Face Recognition Kailash Jagannath Karande 2013-07-15 The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge information. The book provides insights for advance research work in the area of image processing and biometrics.

The Ethics of Belief and Beyond Sebastian Schmidt 2020-04-03 This volume provides a framework for approaching and understanding mental normativity. It presents cutting-edge research on the ethics of belief as well as innovative research beyond the normativity of belief—and towards an ethics of mind. By moving beyond traditional issues of epistemology the contributors discuss the most current ideas revolving around rationality, responsibility, and normativity. The book's chapters are divided into two main parts. Part I discusses contemporary issues surrounding the normativity of belief. The essays here cover topics such as control over belief and its implication for the ethics of belief, the role of the epistemic community for the possibility of epistemic normativity, responsibility for believing, doxastic partiality in friendship, the structure and content of epistemic norms, and the norms for suspension of judgment. In Part II the focus shifts from the practical dimensions of belief to the normativity and rationality of other mental states—especially blame, passing thoughts, fantasies, decisions, and emotions. These essays illustrate how we might approach an ethics of mind by focusing not only on belief, but also more generally on debates about responsibility and rationality, as well as on normative questions concerning other mental states or attitudes. The Ethics of Belief and Beyond paves the way towards an ethics of mind by building on and contributing to recent philosophical discussions in the ethics of belief and the normativity of other mental phenomena. It will be of interest to upper-level students and researchers working in epistemology, ethics, philosophy of action, philosophy of mind, and moral psychology.

Government Program Management Bruce Barkley 2011-02-12 PROVEN STRATEGIES FOR APPLYING PROGRAM MANAGEMENT TECHNIQUES TO PUBLIC SECTOR PERFORMANCE MANAGEMENT

Government Program Management examines ongoing global reforms in public-sector program design and management and explains how to deliver public-sector programs in response to these reforms. A new, generic program management model--essential for government executives, program managers, and legislative leaders--is presented. The new model addresses various dysfunctional forces, many of them global in scale, that inhibit public programs from achieving their intended benefits and outcomes. This in-depth resource discusses broad reforms that fundamentally alter government agency structure, performance reporting and budgeting, composition, and roles and functions. The book also looks at targeted reforms affecting individual programs, covering concept, planning, design, delivery, cost control, and performance reporting. Best practices from both the public and private sectors are covered in this pioneering guide. Government Program Management covers: Forces for change in government program management: impacts of the new public management theory Problems and issues in public program performance and benefits management Agency performance and program management developments in the United States Applying the industry standard for program management according to the Project Management Institute to public agencies and programs The program management office in the public sector Government workforce changes and implications for program management Public program leadership developments Global models and benchmarks for program management: new public management concepts Models for future programs Case study: a national digital health

Gifted Tongues Gary Alan Fine 2010-07-01 Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world--complete with its own jargon and status system--in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In Gifted Tongues, Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.

Education and the Us Government Donald K Sharpes 2021-09-30 Originally published in 1987, at a time when central government control of education in many countries was growing rapidly, this book on the historical determinants of US educational legislation was of great relevance. The book looks in detail at the history of the relationship between the US Government and the provision of educational services. It assesses the contributions made to educational legislation by key political figures such as Franklin, Washington and Jefferson. The author also examines in depth the role of congress and the president, the relationship between the federal government and the state legislature and the role of the judiciary in education. An account of the hard-fought battle for the right to equal educational opportunities for the American Negro and the American Indian is of considerable interest. Finally, the book compares the American educational system at the time with that of other countries.

The Fall and Rise of Freedom of Contract F. H. Buckley 1999-08-06 Declared dead some twenty-five years ago, the idea of freedom of contract has enjoyed a remarkable intellectual revival. In The Fall and Rise of Freedom of Contract leading scholars in the fields of contract law and law-and-economics analyze the new interest in bargaining freedom. The 1970s was a decade of regulatory triumphalism in North America, marked by a surge in consumer, securities, and environmental regulation. Legal scholars predicted the "death of contract" and its replacement by regulation and reliance-based theories of liability. Instead, we have witnessed the reemergence of free bargaining norms. This revival can be attributed to the rise of law-and-economics, which laid bare the intellectual failure of anticontractarian theories. Scholars in this school note that consumers are not as helpless as they have been made out to be, and that intrusive legal rules meant ostensibly to help them often leave them worse off. Contract law principles have also been very robust in areas far afield from traditional contract law, and the essays in this volume consider how free bargaining rights might reasonably be extended in tort, property, land-use planning, bankruptcy, and divorce and family law. This book will be of particular interest to legal scholars and specialists in contract law. Economics and public policy planners will also be challenged by its novel arguments. Contributors. Kissing Architecture Sylvia Lavin 2011-05-09 Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of "kissing" to describe the growing intimacy between architecture and new types of art--particularly multimedia installations that take place in and on the surfaces of buildings--and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function, Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. Kissing Architecture is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow. Addressing one of the most spectacular and significant developments in the current cultural scene, Kissing Architecture is an entertainingly irreverent and disarmingly incisive book that offers an entirely new way of seeing--and experiencing--architecture in the age after representation.

International Human Rights Law and Crimes Against Women in Turkey Ayşe Güne? 2020-12-21 This book evaluates the effectiveness of current international human rights law, and in particular the recent Istanbul Convention, in eradicating so-called honour killings in Turkey. So-called 'honour killings' have become an issue of concern for the international community. In Turkey, in particular, the practice still exists despite the adoption of the relevant human rights instruments. The book argues that the improvement of the status of women in Turkey in accordance with gender equality as well as the application of the principle of state due diligence, both requirements of the Istanbul Convention and international human rights law, are fundamental means towards eradicating the killing of women in the name of 'honour'. Using feminist approaches, in particular the intersectionality approach, the study looks at the application of such standards as well as the current obstacles. Through such a lens, the study discusses the strengths and weaknesses of the Turkish Constitution, Turkish Civil Code, Turkish Penal Code and Law to Protect Family and Prevent Violence Against Women and questions the judicial approach to the implementation of the women's right to life. It identifies the lacunae in the Turkish legislation that allow inadequate legal protection for women and the inconsistency of the judicial approach to the definition of the so-called honour killings in the judgements. The study then recommends some concrete amendments to the relevant legal provisions in order to better reflect the international framework and the feminist approaches. The book will be a valuable resource for academics, researchers and policy-makers in the areas of international human rights law and feminist legal theory.
