The Shoah on Screen Anne-Marie Baron 2006-01-01 This publication considers how cinema, as a major modern art form, has covered topics relating to the Holocaust in documentaries and fiction, historical reconstructions and more symbolic films, focusing on the question of realism in ethical and artistic terms. It explores a range of issues, including whether cinema is an appropriate method for informing people about the Holocaust compared to other media such as CD-ROMs, video or archive collections; whether it is possible to inform and appeal to the emotions without being explicit; and how the medium can nurture greater sensitivity among increasingly younger audiences which have been inured by the many images of violence conveyed in the media. Films discussed include Schindler's List, Life is Beautiful, The Pianist, Sophie's Choice, Shoah, Au revoir les enfants, The Great Dictator and To Be or Not to Be.

Sacred Contracts Caroline Myss 2013-09-04 Caroline Myss, author of the New York Times bestsellers *Anatomy of the Spirit* and *Why People Don't Heal and How They Can*, presents an exciting, highly original program in this long-awaited book. Based on her internationally popular workshop of the same name, *Sacred Contracts* is a brilliant synthesis of psychology, healing guidance, and spiritual insight. As a medical intuitive, Myss has found that people often don't understand their purpose in life, which has led to a spiritual malaise of epidemic proportions. This metaphysical disease in turn leads to depression, anxiety, fatigue, and eventually physical illness. But our purpose—our individual Sacred Contract—is often difficult to apprehend. For this reason, Myss developed an enjoyable and ingenious process for deciphering your own Contract using a new theory of archetypes that builds on the works of Jung, Plato, and contemporary thinkers. She first recounts how the concept of Sacred Contracts took form in myths and other cultural traditions through the ages. She then examines the lives of the spiritual masters and prophets—Abraham, Jesus, the Buddha, and Muhammad—whose archetypal journeys illustrate the four stages of a Sacred Contract and provide clues for discovering your own. With her signature motivational style and stories, Myss explains how you can identify your particular spiritual energies, or archetypes—the gatekeepers of your higher purpose—and use them to help you find out what you are here on earth to learn and whom you are meant to meet. In coming to know your archetypal companions, you also begin to see how to live your life in ways that make the best use of your personal power and lead you to fulfill your greatest—in fact, your divine—potential. In this process, you learn how to see your life—and the lives of others—symbolically, allowing you to manage your personal power without getting caught up in emotional drama. You will also learn how to fulfill your Sacred Contract: what you and only you are here on earth to do. Finally, Myss offers specific guidance for locating your physical and emotional vulnerabilities and healing any susceptible areas. Both visionary and practical, *Sacred Contracts* is a completely unique process of self-discovery and spiritual archaeology and a bold, powerful work of spiritual wisdom.

Mid-Century Modern Furniture Michael Crow 2015-05-20 Minimalist design--maximum style! The Human Capital Imperative Alan Coppin 2017-08-18 "Alan Coppin is a rare individual. His experience and insight span private and public sectors, charities, and the Armed Forces. The vital importance of human capital is the thread which has bound all this together. His book is a rich gold mine of data, research, wisdom and anecdote." —Sir Gerry Grimstone, chairman of Standard Life, deputy chairman of Barclays, non-executive director of Deloitte and lead non-executive director at the Ministry of Defence In this new book Alan Coppin, a leader with extensive cross-sector experience, draws on discussions with leaders in the public and private sectors, as well as from charities, the military and trade unions to offer you the ideas and practical applications that have proved effective in ensuring human capital is properly valued and managed. Most business decisions are based on lag data – historical reporting of what happened last month, last quarter or last year. It's solid, real and comforting. Unfortunately, it's also not a very good indicator of what might happen next. The best lead data – information with genuine predictive power – comes from understanding your people and what they can deliver. All major organizations claim that people are their greatest asset and yet, at the first sign of problems, the first action they take is to fire people. Why, because employees are also an organisation's biggest liability in terms of cost – and their cost is much easier to quantify than their value. But, like any asset, human capital will only deliver its full value if it is properly understood, measured and managed. The author offers you the tools you need to take the issue beyond the HR department and satisfy the number crunchers in the boardroom. With their help, you can make human capital part of the normal financial metrics essential to running a successful organisation. Isn't it time you understood and managed the metrics that can predict your organization's future rather than relying on

those that simply report on its past?

Attention is turning towards interactions between the environment and lifestyles. Exploring the relationships between health, natural environments in general, and forests in particular, this groundbreaking book is the outcome of the European Union's COST Action E39 'Forests, Trees and Human Health and Wellbeing', and draws together work carried out over four years by scientists from 25 countries working in the fields of forestry, health, environment and social sciences. While the focus is primarily on health priorities defined within Europe, this volume explicitly draws also on research from North America.

Sensor Technologies Michael J. McGrath 2014-01-23 Sensor Technologies: Healthcare, Wellness and Environmental Applications

explores the key aspects of sensor technologies, covering wired, wireless, and discrete sensors for the specific application domains of healthcare, wellness and environmental sensing. It discusses the social, regulatory, and design considerations specific to these domains. The book provides an application-based approach using real-world examples to illustrate the application of sensor technologies in a practical and experiential manner. The book guides the reader from the formulation of the research question, through the design and validation process, to the deployment and management phase of sensor applications. The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs. "Sensor Technologies: Healthcare, Wellness and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare, wellness, and environmental monitoring. From sensor hardware to system applications and case studies, this book gives readers an in-depth understanding of the technologies and how they can be applied. I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications." Dr. Benny Lo Lecturer, The Hamlyn Centre, Imperial College of London "This timely addition to the literature on sensors covers the broad complexity of sensing, sensor types, and the vast range of existing and emerging applications in a very clearly written and accessible manner. It is particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud-based 'big data' analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present. It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of 'big data' down to the personal level of individual life and health." Dermot Diamond Director, National Centre for Sensor Research, Principal Investigator, CLARITY Centre for Sensor Web Technologies, Dublin City University "Sensor Technologies: Healthcare, Wellness and Environmental Applications takes the reader on an end-to-end journey of sensor technologies, covering the fundamentals from an engineering perspective, introducing how the data gleaned can be both processed and visualized, in addition to offering exemplar case studies in a number of application domains. It is a must-read for those studying any undergraduate course that involves sensor technologies. It also provides a thorough foundation for those involved in the research and development of applied sensor systems. I highly recommend it to any engineer who wishes to broaden their knowledge

in this area!" Chris Nugent Professor of Biomedical Engineering, University of Ulster

Racial Folly Gordon Briscoe 2010-02-01 Briscoe's grandmother remembered stories about the first white men coming to the Northern Territory. This extraordinary memoir shows us the history of an Aboriginal family who lived under the race laws, practices and policies of Australia in the twentieth century. It tells the story of a people trapped in ideological folly spawned to solve 'the half-caste problem'. It gives life to those generations of Aboriginal people assumed to have no history and whose past labels them only as shadowy figures. Briscoe's enthralling narrative combines his, and his contemporaries, institutional and family life with a high-level career at the heart of

the Aboriginal political movement at its most dynamic time. It also documents the road he travelled as a seventeen year old fireman on the South Australia Railways to becoming the first Aboriginal person to achieve a PhD in history.
