Scientists, Mathematicians, and Inventors provides biographies of 200 men and women who changed the world by leaving lasting legacies in the fields of science, mathematics, and scientific invention. It fills a gap in the biographical reference shelf by offering far more than basic facts about a scientist's life and work: each entry describes not only the immediate effects of the individual's discoveries, but also his or her impact on later scientific findings.

Across the realms of multimedia production, information design, web development, and usability, certain truisms are apparent. Like an Art of War for design, this slim volume contains guidance, inspiration, and reassurance for all those who labor with the user in mind. If you work on the web, in print, or in film or video, this book can help. If you know someone working on the creative arena, this makes a great gift. Funny, too.

Modern methods of mind control--employed in propaganda, indoctrination, even advertising--can be traced back to ninja strategies of psychological warfare developed and refined centuries ago in medieval Japan. The ninja were accomplished in covert operations such as espionage, assassination, and sabotage, and were feared for their ability to break through an adversary's mental defenses and use his fears, insecurities, superstitions, and hopes and beliefs against him. This is a modern-day guide to ninja techniques, including: revelation of an enemy's deepest secrets, ways to implant false memories, how to detect when somebody is lying, and visualizations to affect physical health. You will also learn defenses against mind-manipulating techniques commonly used in media and politics.--From publisher description.

Information on Black scientists and inventors is becoming more readily available to the general public and this is a welcome development. However, information specifically on the scientific and technological contributions of the Ancient Egyptians is not as readily available as one might think. Great books and essays have been written on the topic but many authors have pitched their works above the level of the ordinary reader. Other papers are in difficult-to-find journals and collections. Some writers, in an attempt to bring greater prestige to twentieth century

European and European American science, dismiss all ancient science as superstition and error. They emphasize what the Ancient Egyptians did not know as opposed to what they did know. In this book, Blacks and Science Volume One, I bring the information together in one place. I write positively about what the Ancient Egyptians achieved and do not waste ink on what they did not achieve. Finally I present the information in as straightforward and accessible a way as possible. Should you read this book and learn the information: * You will gain a greater mastery over Black or African History * Your knowledge will be the envy of your friends and family * Learning your historical contributions will skyrocket your confidence and esteem * Your interest in all areas of human culture will dramatically increase * You will have a vast reserve of information to pass on to your children This book is largely a synthesis of my previously published Kindle e-books Ancient Egyptian Contributions to Science and Technology combined with The Mysterious Sciences of the Great Pyramid. The feedback I received from these e-books was positive, but many people asked me if was possible to turn these lecture essays into physical books. After all, not everybody possesses a Kindle! My response was to produce this book Blacks and Science Volume One. Very shortly, other volumes in this series will be issued. The first part of this book is a general introduction to the role played by the Ancient Egyptians in the origin and evolution of Mathematics, Astronomy, Medicine & Surgery, Navigation & Cartography, Architecture, Construction and other areas that are more controversial. The second part of the book focuses on one monument--the Great Pyramid of Giza. In this section, I review the discussions and speculations of what the Ancient Egyptians probably knew about pi, phi, the Dimensions of the Earth, etcetera. Robin Walker

Another body in a string of ritualistic murders. A serial killer who's getting cocky. Detective Derek Childress thinks this day just can't get any worse. And then he meets his new partner. Investigator Kayle Perrine is a Variant: one of several races of once-thought mythical creatures who now live among and lord-over humankind. Led by a group of vampires called the Clan Gentry, the Variants protect their own, just as they did when Derek's previous partner was killed by one, nearly a year ago. Now that Perrine's on the case, Derek expects a cover-up. Kayle Perrine has worked his whole life to prove himself, but being paired up with a boorish mundane like Derek Childress is feeling more like punishment than reward. Derek is so blinded by his prejudice against Variants, that he refuses to see the evidence Kayle finds blatantly obvious. The sooner Kayle can close this case, the sooner he can go back home and forget about the infuriating human detective. A brutal attack forges a fragile truce between the two men, driving them together. Derek and Kayle must learn to trust and depend on each other while tempers flare and passions of every kind run hot between them. Yet as they begin to grow closer, one fact continues to keep them apart: they are from different worlds. With time running out to solve this case, Derek and Kayle understand that love may not be enough to overcome prejudice, politics, and murder.

Examines cultural analogies between Native Americans and Africans, offering evidence of the presence of African explorers in the New World centuries before the arrival of Columbus.

In Postmodern Winemaking, Smith shares knowledge he has accumulated in engaging, humorous, and erudite essays that convey a new vision of the winemaker's craft—one that credits the crucial roles played by both science and art in the winemaking process. Smith, a leading innovator in red wine production techniques, explains how traditional enological education has led many winemakers astray—enabling them to create competent, consistent wines while putting exceptional wines of structure and mystery beyond their grasp. Great wines, he claims, demand a personal and creative engagement with many elements of the process. His lively exploration of the facets of postmodern winemaking, together with profiles of some of its practitioners, is both entertaining and enlightening.

H.G. Wells, the author, has been called the father of science fiction. 'The Time Machine' is one of his most notable science fictions. It's a Time Traveller's journey into the future. He explains that there are really four dimensions, three of which we call the three planes of the Space, and a fourth, Time. Also, there is no difference between Time and any of the three dimensions of Space except that our consciousness moves along it. The book narrates how the Time Traveller plans for a machine to travel through time and disappear. Comparison between the present time and future time. Like as, the air is free from gnats, the earth from weeds or fungi; everywhere were fruits and sweet and delightful flowers; brilliant butterflies fly hither and thither. The ideal of preventive medicine is attained. Diseases are stamped out. No contagious diseases. Even social triumphs

too is effected. Like as, the mankind is housed in splendid shelters, gloriously clothed, and as yet are not engaged in toil. No signs of struggle, neither social nor economical. The population is also ceased to increase. No one can predict anything about the future Time. This book seems very interesting, in this way. Solves many queries raised by the various characters in the book with the Time Traveller. The author has written his best to enthrall the readers. Many future films and Television Series are made on "The Time Machine", which has in turn inspired to write new books on the topic of "The Time Machine".

This book provides irrefutable evidence that ancient Indian sages knew the age of the Solar System and Universe within 0.1% of the modern scientific values. The sages acquired this knowledge from Vedic gods who reside in a higher-dimensional world, of which our world is a four-dimensional, space-time projection. Paleontologists and Geologists will surely be impressed by the sages' knowledge of Earth's greatest mass extinction, the Neoproterozoic Snowball Earth, and the Cambrian Explosion. Furthermore, the ancient sages accurately predicted the Sun's future evolution into a Red Giant, and its ultimate explosion into planetary nebulae. A revolutionary implication of this knowledge is that the course of universal events has been controlled by Vedic gods, which is a stark refutation of Hawking's famous declaration that God is unnecessary.

A considerable amount of public debate and media print has been devoted to the "war between science and religion." In his accessible and eminently readable new book, Stephen M. Barr demonstrates that what is really at war with religion is not science itself, but a philosophy called scientific materialism. Modern Physics and Ancient Faith argues that the great discoveries of modern physics are more compatible with the central teachings of Christianity and Judaism about God, the cosmos, and the human soul than with the atheistic viewpoint of scientific materialism. Scientific materialism grew out of scientific discoveries made from the time of Copernicus up to the beginning of the twentieth century. These discoveries led many thoughtful people to the conclusion that the universe has no cause or purpose, that the human race is an accidental by-product of blind material forces, and that the ultimate reality is matter itself. Barr contends that the revolutionary discoveries of the twentieth century run counter to this line of thought. He uses five of these discoveries—the Big Bang theory, unified field theories, anthropic coincidences, Gödel's Theorem in mathematics, and quantum theory—to cast serious doubt on the materialist's view of the world and to give greater credence to Judeo-Christian claims about God and the universe. Written in clear language, Barr's rigorous and fair text explains modern physics to general readers without oversimplification. Using the insights of modern physics, he reveals that modern scientific discoveries and religious faith are deeply consonant. Anyone with an interest in science and religion will find Modern Physics and Ancient Faith invaluable.

BLACK HISTORY EXTRAVAGANZA honoring Dr. Ben-Jochannan is a labor of love for someone intimately associated with the master teacher for some 40 years as student, traveling companion, mentee and friend. In repayment, this effort to help acknowledge and sustain his name, life's work and historical and philosophic outlook is necessary so the younger generation know of the enormous intellectual light this extraordinary scholar represented in those extremely challenging social and intellectual times of the last half century. As the systematic onslaught against the African (Black) personality continued, one particular scholar, lecturer, historian, publisher, archaeologist and tour guide to Egypt stood unmoved and unrelenting in defense of an entire people's history, culture and spiritual well-being. In this, Dr. Ben took on all disparaging comers as he educated and nurtured intellectual "cubs" becoming equipped to challenge historical distortion and omission manifested from the false mantle of global white supremacy. To accomplish the enormous task, Dr. Ben wrote, innovated self-publishing, lectured, and took students to museums and to Egypt pointing out contradictions between the Existential Data and the symbolic Representation of ancient Egypt. Table of Contents, viz., Introduction; The Awesome Egyptian Temple; Who were the Ancient Egyptians;? The Archaeology of Egypt; The Art of Ancient Egypt; Architecture of Ancient Egypt; The Religion of Ancient Egypt; and the History of Egypt, Dr. Ben made a substantial impact while educating students as

to the utility and benefits of studying the illustrious African past, emphasizing they accentuate the positive and reject negative aspects of that memorable experience. Like the many intellectual lights, "warrior scholars," of his age, viz., Dr. John Henrik Clarke, Ivan Van Sertima, Leonard James, Carter G. Woodson, Benjamin Carruthers, J.A. Rogers, Jitu Weusi, Leonard Jeffries, among others, Dr. Ben subscribed to one unmistakable academic admonition pursuing excellence, "Publish or Perish." This continuum of praise (Celebrating Dr. Yosef Ben-Jochannan), Black History Extravaganza seeks a starting point for readers, young and old to delve deep and drink from the remarkable fountain represented in fields of study which engaged the great scholar for more than half-a-century.

A critical reevaluation of ancient spiritual systems long ignored or rejected because of their assumed incompatibility with science. 2017 PROSE Award Winner: Outstanding Scholarly Work by a Trade Publisher In the vein of Jane Jacobs's *The Death and Life of Great American Cities* and Edward Glaeser's *Triumph of the City*, Jonathan F. P. Rose—a visionary in urban development and renewal—champions the role of cities in addressing the environmental, economic, and social challenges of the twenty-first century. Cities are birthplaces of civilization; centers of culture, trade, and progress; cauldrons of opportunity—and the home of eighty percent of the world's population by 2050. As the 21st century progresses, metropolitan areas will bear the brunt of global megatrends such as climate change, natural resource depletion, population growth, income inequality, mass migrations, education and health disparities, among many others. In *The Well-Tempered City*, Jonathan F. P. Rose—the man who "repairs the fabric of cities"—distills a lifetime of interdisciplinary research and firsthand experience into a five-pronged model for how to design and reshape our cities with the goal of equalizing their landscape of opportunity. Drawing from the musical concept of "temperament" as a way to achieve harmony, Rose argues that well-tempered cities can be infused with systems that bend the arc of their development toward equality, resilience, adaptability, well-being, and the ever-unfolding harmony between civilization and nature. These goals may never be fully achieved, but our cities will be richer and happier if we aspire to them, and if we infuse our every plan and constructive step with this intention. A celebration of the city and an impassioned argument for its role in addressing the important issues in these volatile times, *The Well-Tempered City* is a reasoned, hopeful blueprint for a thriving metropolis—and the future.

Physics is the fundamental branch of science that developed out of the study of nature and philosophy known, until around the end of the 19th century, as "natural philosophy." Today, physics is ultimately defined as the study of matter, energy and the relationships between them. Physics is, in some senses, the oldest and most basic pure science; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world. The other sciences are generally more limited in their scope and may be considered branches that have split off from physics to become sciences in their own right. Physics today may be divided loosely into classical physics and modern physics. Elements of what became physics were drawn primarily from the fields of astronomy, optics, and mechanics, which were methodologically united through the study of geometry. These mathematical disciplines began in antiquity with the Babylonians and with Hellenistic writers such as Archimedes and Ptolemy. Ancient philosophy, meanwhile - including what was called "physics" - focused on explaining nature through ideas such as Aristotle's four types of "cause."

The Mises Institute is thrilled to bring back this popular guide to ridiculous economic policy from the ancient world to modern times. This outstanding history illustrates the utter futility of fighting the market process through legislation. It always uses despotic measures to yield socially catastrophic results. It covers the ancient world, the Roman Republic and Empire, Medieval Europe,
