Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Coleen Belk and Virginia Borden Maier have helped students demystify biology for nearly twenty years in the classroom and nearly ten years with their book, Biology: Science for Life with Physiology. In the new Fourth Edition, they continue to use stories and current issues, such as discussion of cancer to teach cell division, to connect biology to student's lives. Learning Outcomes are new to this edition and integrated within the book to help professors guide students' reading and to help students assess their understanding of biology. A new Chapter 3, "Is It Possible to Supplement Your Way to Better Health? Nutrients and Membrane Transport," offers an engaging storyline and focused coverage on micro- and macro-nutrients, antioxidants, passive and active transport, and exocytosis and endocytosis. Fiercely moving, the two long narrative poems of Martín & Meditations on the South Valley revolve around the semi-autobiographical figure of Martín, a mestizo or "detrribalized Apache." Abandoned as a child and a long time on the hard path to building his own family, Martín at last finds his home in the stubborn and beautiful world of the barrio. Jimmy Santiago Baca "writes with unconcealed passion," Denise Levertov states in her introduction, "but he is far from being a naive realist; what makes his writing so exciting to me is the way in which it manifests both an intense lyricism and that transformative vision which perceives the mythic and archetypal significance of life-events."

Does the vaccine for measles, mumps, and rubella cause autism? What is the most common reason that DNA analyses overturn incorrect criminal convictions? What genetically modified foods do most people in the United States consume (usually without knowing it)? In his popular classes and bestselling textbooks, Jay Phelan uses questions like these as a way of introducing both the practical impact and awe-inspiring wonder of biological research. Phelan knows how to captivate nonmajors with stories of how scientists investigate life. He is also a master at using the study of biology as a context for developing the critical thinking skills and scientific literacy students can draw on through college and beyond. Phelan's dynamic approach to teaching biology is the driving force behind What Is Life?--the most successful new non-majors biology textbook of the millennium. The rigorously updated new edition brings forward the features that made the book a classroom favorite (chapters anchored to intriguing questions about life, spectacular original illustrations, innovative learning tools) with a more focused and flexible presentation and enhanced art. And more than ever, this edition is a seamless text/media source, with its dedicated version of LaunchPad, Macmillan's breakthrough online course space which integrates an interactive e-Book, all student media, a wide range of assessment and course management features.

In 2010, while editing a report on the effects of climate change in Iowa, ecologist Cornelia Mutel came to grips with the magnitude and urgency of the problem. She already knew the basics: greenhouse gas emissions and global average temperatures are rising on a trajectory that could, within decades, propel us beyond far-reaching, irreversible atmospheric changes; the results could devastate the environment that enables humans to thrive. The more details she learned, the more she felt compelled to address this emerging crisis. The result is this book, an artful weaving together of the science behind rising temperatures, tumultuous weather events, and a lifetime devoted to the natural world. Climate change isn't just about melting Arctic ice and starving polar bears. It's weakening the web of life in our own backyards. Moving between two timelines, Mutel pairs chapters about a single year in her Iowa woodland with chapters about her life as a fledgling and then professional student of nature. Stories of her childhood ramblings in Wisconsin and the solace she found in the Colorado mountains during early adulthood are merged with accounts of global environmental dilemmas that have redefined nature during her lifespan. Interwoven chapters bring us into her woodland home to watch nature's cycles of life during a single year, 2012, when weather records were broken time and time again. Throughout, in a straightforward manner for a concerned general audience, Mutel integrates information about the science of climate change and its dramatic alteration of the planet in ways that clarify its broad reach, profound impact, and seemingly relentless pace. It is not too late, she informs us: we can still prevent the most catastrophic changes. We can preserve a world full of biodiversity, one that supports human lives as well as those of our myriad companions on this planet. In the end, Mutel offers advice about steps we can all take to curb our own carbon emissions and strategies we can suggest to our policy-makers.

"Tells the darkly humorous story of the French colonial state's failed efforts to impose its vision of modernity upon the colonial city of Hanoi, Vietnam. This book offers a case study in the history of imperialism, highlighting the racialized economic inequalities of empire, colonization as a form of modernization, and industrial capitalism's creation of a radical power differential between "the West and the rest." On a deeper level, The Great Hanoi Rat Hunt will engage the contradictions unique to the French Third Republic's colonial "civilizing mission," the development of Vietnamese resistance to French rule, the history of disease, and aspects of environmental history"--
