In Ship Modeling Simplified, master model builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull "egg-shell tight"; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. Ship Modeling Simplified even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

They're everywhere, and they have a pretty usable amount of space that they make available as well, so they're sort of like building blocks for homes and other buildings that you may have to construct. Because they're so cheap and they're made of metal, they're naturally reflective of most of the heat that the summer sun would pound into regular buildings and houses through the typically black shingled roof of those buildings. So shipping containers have relatively good insulation already built into them and ready to go. But there are many benefits to building with one or many shipping containers beyond that. But strangely, you don't see every house on the block being constructed out of shipping containers. Why not though? It's like building your house out of gigantic Lego pieces! Why hasn't anyone thought of building with these things before!? Why isn't building with shipping containers all the rage? Container homes are exactly what they sound like; homes made from the steel shipping containers that you see carrying goods everywhere on trains, trucks, and ships. From these giant Lego blocks, people are building homes of all shapes and sizes. The purpose of this guide is to provide a detailed walk-through of each step of the process of shipping container selection, transport, foundation, utilities, modification, and finishing. In each chapter, one aspect of construction is explored in depth, beginning with the planning process and extending through to the completed home. Included in each chapter are pictures of each stage of construction, providing real-life examples to help put the theory into tangible terms.

Clearly define your product and develop your mission and strategy Assemble your team and understand enough about systems to communicate with them Create a beautiful, intuitive, and simple user experience Track your team's deliverables and closely manage the testing process Communicate clearly to gracefully handle requests, senior-management interactions, and feedback from various sources Build metrics to track progress, spot problems, and celebrate success Stick to your launch checklist and plan for marketing and PR

The purpose of this guide is to provide a detailed walk-through of each step of the process of shipping container selection, transport, foundation, utilities, modification, and finishing. In each chapter, one aspect of construction is explored in depth, beginning with the planning process and extending through to the completed home. Included in each chapter are pictures of each stage of construction, providing real-life examples to help put the theory into tangible terms. Even though this guide is not a manual to building a specific home, it still provides valuable insights you can apply to each step of the building process.
