In addition, discussions are considered against the backdrop of other quantitative and qualitative corporate issues that affect valuation, including: Organizational structure and incentives: The text examines how the corporate decision-making process as well as the incentive system can positively or negatively affect valuation. Strategic analysis and real options: Real options are presented as a tool to complement executive intuition and provide a more disciplined evaluation process that focuses on creating value. Risk management and hedging: Risks associated with interest rate fluctuations, variable foreign exchange rates, and fluctuating commodity prices can create hedging and risk management opportunities that affect value. Financing: The ability to secure attractive financing terms is an important source of value, and readers should understand how financing opportunities influence the value of an investment opportunity. This collection of essays explores two traditions of interpreting and manipulating nature in the early-modern and nineteenth-century Iberian world: one instrumental and imperial, the other patriotic and national. Imperial representations laid the ground for the epistemological transformations of the so-called Scientific Revolutions. The patriotic narratives lie at the core of the first modern representations of the racialized body, Humboldtian theories of biodistribution, and views of the landscape as a historical text representing different layers of historical memory.
