Pharmaceutical Jurisprudence [i.e. Jurisprudence] and Ethics

This book explores the question of justification of law. It examines some perennial jurisprudential debates and suggests that law must find its justification in morality. Drawing upon the Aristotelian inspiration that friends have no need for justice - in (ideal) friendship, we behave justly - Seow Hon Tan develops a theory of law based on the universal phenomenon of friendship. Friendships and legal relations attract rights and obligations by virtue of the manner in which parties are situated. Friendship teaches us that how parties are situated gives rise to legitimate expectations; it attests to the intrinsic worth of each person. The methodology for deciphering norms within, and moral lessons from, friendship can be transposed to law, resulting in an inter-subjectively agreeable and rich conception of justice. In determining the content of legal rights and obligations, we can and should draw upon such determination in friendship. Justice as Friendship aims to provide a vision for law's development and invites the practitioner to advance its central claims in their area of expertise. In dealing with selected legal doctrines, the book draws upon illustrative cases from the United States, the United Kingdom, and the Commonwealth. The book traverses the

fields of jurisprudence, philosophy, ethics, political theory, contract law, and tort law.

This book examines ethics at the intersection of law and justice. If law and justice are concerned with collectively establishing the general terms on which the plurality called "we" share the earth as social beings, then ethics concerns the individual Self's particular moral relationship with the Other. Law, the acknowledged offspring of politics, represents the kind of might that most people accept as legitimate, at least most of the time. Justice, on the other hand, is supposed to vigilantly stand guard over law: to protect us against its biases and excesses, or, at the very least, to rise up and reproach the law whenever it permits or encourages injustice. But what if the belief that a particular legally-authorized state of affairs is "just" – a common enough feeling, especially amongst the privileged – or even "unjust" and in need of correction, were itself in need of a vigilant guardian? This book argues that ethics can and should stand guard over whatever image of justice and/or just law one happens to believe in. The book thus attempts to steer a perilous course between two looming moral hazards: ethics interpreted as the rational production of ethically correct behavior (as in Kant) and ethics interpreted as the spontaneous eruption of pre-rational compassion for the suffering of the Other, come what may (as in Levinas). In the

end, the book characterizes ethical life in the law as the more-or-less constant experience of the paradoxical nature of this choice – a feeling of inescapable personal responsibility for the fate of the Other. Based on the author's well-established expertise in the area, this book will appeal to students, scholars and others with interests in legal theory and moral and political philosophy.

A comprehensive text book by Wolters Kluwer Lippincott covering all key features that are very helpful for the medical students.

Exploring potential scenarios of artificial intelligence regulation which prevent automated reality harming individual human rights or social values, this book reviews current debates surrounding AI regulation in the context of the emerging risks and accountabilities. Considering varying regulatory methodologies, it focuses mostly on EU's regulation in light of the comprehensive policy making process taking place at the supranational level. Taking an ethics and humancentric approach towards artificial intelligence as the bedrock of future laws in this field, it analyses the relations between fundamental rights impacted by the development of artificial intelligence and ethical standards governing it. It contains a detailed and critical analysis of the EU's Ethic Guidelines for Trustworthy AI, pointing at its practical applicability by the interested parties. Attempting to identify the most transparent and efficient regulatory tools that can

assure social trust towards AI technologies, the book provides an overview of horizontal and sectoral regulatory approaches, as well as legally binding measures stemming from industries' self-regulations and internal policies. Pharmacists face ethical choices constantly -- sometimes dramatic life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide, conscientious refusal, pain management, equitable distribution of drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first new chapter presents a new model for analyzing cases, while the second focuses on the ethics of new drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet based pharmacies.

The contributions to Law and Art address the interaction between law, justice, the ethical and the aesthetic.

This book explores the scope, application and role of medical law, regulatory norms and ethics, and addresses key challenges introduced by contemporary advances in biomedical research and healthcare. While mindful of national developments, the handbook supports a global perspective in its approach to medical law. Contributors include leading scholars in both medical law and ethics, who have developed specially commissioned pieces in order to present a critical overview and analysis of the current state of medical law and ethics. Each chapter offers comprehensive coverage of longstanding and traditional topics in medical law and ethics, and provides dynamic insights into contemporary and emerging issues in this heavily debated field. Topics covered include: Bioethics, health and human rights Medical liability Law and emerging health technologies Public health law Personalized medicine The law and ethics of access to medicines in developing countries Medical research in the genome era Emerging legal and ethical issues in reproductive technologies This advanced level reference work will prove invaluable to legal practitioners, scholars, students and researchers in the disciplines of law, medicine, genetics, dentistry, theology, and medical ethics.

This book argues that the international community has a moral duty to intervene on behalf of a population affected by a natural hazard when their government is either unable or unwilling to provide basic, life-saving assistance. The work draws on law, international relations theory, and political philosophy to articulate that non-response to a natural hazard is unethical. In providing policy suggestions the author articulates what should happen based on an ethical

analysis. Readers will thus gain an ethical lens with which to view intervention in the aftermath of a natural hazard. The book encourages readers to consider the nuances of arguments from various disciplines about whether or not intervention is appropriate. Whilst arguing throughout that an intervention policy in response to natural hazards should be developed by the international community, the study also accounts for why intervention should only be used in very limited situations. This interdisciplinary approach makes the book essential reading for researchers, academics and policy-makers working in the areas of international law, humanitarian studies, human rights, international relations and political science.

If a competent adult refuses medical treatment, physicians and public officials must respect her decision. Coercive medical paternalism is a clear violation of the doctrine of informed consent, which protects patients' rights to make medical decisions even if a patient's choice endangers her health. The same reasons for rejecting medical paternalism in the doctor's office are also reasons to reject medical paternalism at the pharmacy, yet coercive medical paternalism persists in the form of premarket approval policies and prescription requirements for pharmaceuticals. In *Pharmaceutical Freedom* Jessica Flanigan defends patients' rights of self-medication. Flanigan argues that public officials should certify drugs instead of enforcing prohibitive pharmaceutical policies that disrespect people's rights to make intimate medical decisions and prevent patients from accessing potentially beneficial new therapies. This argument has revisionary implications for important and timely debates about medical paternalism, recreational drug legalization, human enhancement, prescription drug prices, physician assisted suicide, and pharmaceutical marketing. The need for reform is especially urgent as medical treatment becomes increasingly personalized and patients advocate for the

right to try. The doctrine of informed consent revolutionized medicine in the twentieth century by empowering patients to make treatment decisions. Rights of self-medication are the next step.

The ethics of creating -- or declining to create -- human beings has been addressed in several contexts: debates over abortion and embryo research; literature on "self-creation"; and discussions of procreative rights and responsibilities, genetic engineering, and future generations. Here, for the first time, is a sustained, scholarly analysis of all of these issues -- a discussion combining breadth of topics with philosophical depth, imagination with current scientific understanding, argumentative rigor with accessibility. The overarching aim of *Creation Ethics* is to illuminate a broad array of issues connected with reproduction and genetics, through the lens of moral philosophy. With novel frameworks for understanding prenatal moral status and human identity, and exceptional fairness to those holding different views, David DeGrazia sheds new light on the ethics of abortion and embryo research, genetic enhancement and prenatal genetic interventions, procreation and parenting, and decisions that affect the quality of life of future generations. Along the way, he helpfully introduces personal identity theory and value theory as well as such complex topics as moral status, wrongful life, and the "nonidentity problem." The results include a subjective account of human well-being, a standard for responsible procreation and parenting, and a theoretical bridge between consequentialist and nonconsequentialist ethical theories. The upshot is a synoptic, mostly liberal vision of the ethics of creating human beings.

Questions surrounding the concept of freedom versus security have intensified in recent years due to the rise of new technologies. The increased governmental use of technology for data collection now poses a threat to citizens' privacy and is drawing new ethical concerns. *Ethical Issues and Citizen Rights in the Era of Digital Government Surveillance* focuses on the risks presented by the usage of surveillance technology in the virtual public sphere and how such practices have called for a re-examination of what limits should be imposed. Highlighting

international perspectives and theoretical frameworks relating to privacy concerns, this book is a pivotal reference source for researchers, professionals, and upper-level students within the e-governance realm.

Examining the theoretical and empirical status of applied ethics, this volume demonstrates how a pluralistic and democratic society can deal with ethical issues in the light of its moral conscience. The volume first sets the stage for a conception of applied ethics as applications of transnational civil ethics, based both on a discourse theory of knowledge (Apel, Habermas), and on an activities and capabilities approach (Aristotle, Sen). It then examines how applied ethics relates to important theoretical discussions in philosophy such as constructivism, virtue ethics, hermeneutic and deliberative theory. The contributors discuss applied ethics in light of globalization and identify recurring dilemmas as well as the problem of universal norms. They close by considering two aspects of the institutional point of view - republicanism, and contractarianism and constitutional economics.

As one of the most massive and successful business sectors, the pharmaceutical industry is a potent force for good in the community, yet its behaviour is frequently questioned: could it serve society at large better than it has done in the recent past? Its own internal ethics, both in business and science, may need a careful reappraisal, as may the extent to which the law - administrative, civil and criminal - succeeds in guiding (and where necessary constraining) it. The rules of behavior that may be considered to apply to today's pharmaceutical industry have emerged over a very long period and the process goes on. Even the immensely detailed standards for quality, safety and efficacy laid down in drug law and regulation during the second half of the twentieth century have their limitations as tools for ensuring that the public

interest is well served. In particular, national and regional regulatory agencies are heavily dependent on industrial data for their decision-making, their standards and competence vary, and even the existing network of agencies does not cover the entire world. What is more there are many areas of law and regulation affecting the industry, concerning for example the pricing of medicines, the conduct of clinical studies, the health protection of workers and concern for the environment. In some fields it is indeed hardly possible to maintain standards through regulation. Professor N.M. Graham Dukes, a physician and lawyer with long term experience in industrial research management, academic study and international drug policy, provides here a powerfully documented analysis into the way this industry thinks, acts, and is viewed, and examines the current trends pointing to change. *Provides a balanced picture of the current role of the pharmaceutical industry in society *Includes indices of conventions, laws, and regulations; as well as judicial and disciplinary cases *This is the only book addressing the legal implications of big pharma activities and ethical standards

Law and ethics are two vital aspects of social work – all social workers need to practise according to the law and their codes of ethics and conduct. However, the relationship between the law and social work values and ethics is not without its tensions and this book takes a problem-based approach to explore the dilemmas and challenges that can arise. The first part of the book sets out frameworks for thinking about the law and ethics, and how they relate to social work. It also introduces some of the big philosophical and sociological questions about the purposes of law and of ethics and how they relate to society more generally. In the second part, the book explores a series of areas where profound dilemmas arise – such as end-of-life decisions, respecting peoples' choices but ensuring their safety and that of others,

responsibility and blame, making allowance for different cultural traditions and breaking confidentiality. In each of the problem-based chapters, this accessible text: outlines the relevant law discusses court judgments in leading cases considers the implications of different ethical frameworks pulls out key ethical questions and challenges for social work. Social Work, Law and Ethics highlights what the law says and what it offers, what ethical principles are at stake, and what these imply for social work policy and practice. In this way, it uses real-life scenarios to analyse the dynamic interactions of social work, law and ethics. It is essential reading for all social work students.

Critical Interventions in the Ethics of Healthcare argues that traditional modes of bioethics are proving incommensurable with burgeoning biotechnologies and consequently, emerging subjectivities. Drawn from diverse disciplines, this volume works toward a new mode of discourse in bioethics, offering a critique of the current norms and constraints under which Western healthcare operates. The contributions imagine new, less paternalistic, terms by which bioethics might proceed - terms that do not resort to exclusively Western models of liberal humanism or to the logic of neoliberal economies. It is argued that in this way, we can begin to develop an ethical vocabulary that does justice to the challenges of our age. Bringing together theorists, practitioners and clinicians to present a wide variety of related disciplinary concerns and perspectives on bioethics, this volume challenges the underlying assumptions that continue to hold sway in the ethics of medicine and health sciences.

This book examines an interesting and relatively understudied area of the evolution of the international rule of law and the role of professional ethics. The rule of law has been gradually developed and promoted at the national level over centuries, however at the international level it has only recently received (more in rhetoric than in implementation) support from a macro perspective - developments of international rules and institutions, and from a micro perspective - ethical codes, independence and un-bias of professionals, working in international organizations and tribunals. The book offers analysis and recommends policies to strengthen the rule of law at international level to meet a major global governance demand in ensuring

equity, justice, stability and consistency in international affairs.

This publication identifies and discusses important challenges affecting eHealth in the EU and North America in the three areas of law, ethics and governance. It makes meaningful contributions to the eHealth discourse by suggesting solutions and making recommendations for good practice and potential ways forward. Legal challenges discussed include issues related to electronic medical records, telemedicine, the Internet and pharmaceutical drugs, healthcare information systems and medical liability. Ethical challenges focus on telehealth and service delivery in the home, Web 2.0 and the Internet, patient perceptions and ethical frameworks. Governance challenges focus on IT governance in healthcare, governance and decision-making in acute care hospitals, and different models of eHealth governance. The publication provides useful support materials and readings for persons active in developing current understandings of the legal, ethical and governance challenges involved in the eHealth context.

Are pregnant women entitled to the same rights of self-determination and bodily integrity as other adults? This is the fundamental question underlying recent high-profile legal interventions in situations when pregnant women and healthcare staff do not agree on management options

or appropriate behaviour. Courts on both sides of the Atlantic have sometimes answered that they are not, and the law has at times been manipulated to enforce compliance with medical recommendations. This is the first book of its kind to offer a comprehensive assessment of healthcare law as applied to the unique situation of pregnancy. Drawing on case material from both the UK and the USA, it describes the trend towards 'policing pregnancy' and explores the emergence of the concept of 'maternal-foetal conflict' - and why, in the author's view, this would be more appropriately labelled 'obstetric conflict'. Suggestions are made for alternative approaches that better safeguard the overall well-being of pregnant women and their future children.

The source of hospitality lies in the fundamental ethical experiences that make up the fabric of the social lives of people. Therein lies a primary form of humanity. Whether we are guests or hosts, this reveals our situation in a world made up of receiving and meeting, leaving room for the liberty to give and receive beyond the imperatives of reciprocity. This book proposes an ethic that promotes the possibility of stirring emotion before that of protecting ourselves from unexpected encounters. Fundamental ethical competence consists of opening up to the wholly other and to others, to be accessible to the world's solicitations. There is moral superiority of vulnerable love over control and moderation, of generous passion over rational prudence and of excess over exchange. Constructing an ethic of hospitality is essential at a time when we are torn between the imperatives of modernization and growth and the demands of concern and protection. The experience we all have today, that of the fragility of the world, is giving rise to a powerful tendency toward solicitude. From such a perspective, the duty of individuals no longer consists of protecting themselves from society, but of defending it, taking care of a

social fabric outside of which no identity can be formed.

This volume examines the ethical issues that arise as a result of national security intelligence collection and analysis. Powerful new technologies enable the collection, communication, and analysis of national security data on an unprecedented scale. Data collection now plays a central role in intelligence practice, yet this development raises a host of ethical and national security problems, such as: privacy; autonomy; threats to national security and democracy by foreign states; and accountability for liberal democracies. This volume provides a comprehensive set of in-depth ethical analyses of these problems by combining contributions from both ethics scholars and intelligence practitioners. It provides the reader with a practical understanding of relevant operations, the issues that they raise, and analysis of how responses to these issues can be informed by a commitment to liberal democratic values. This combination of perspectives is crucial in providing an informed appreciation of ethical challenges that is also grounded in the realities of the practice of intelligence. This book will be of great interest to all students of intelligence studies, ethics, security studies, foreign policy, and International Relations. The book “Pharmaceutical Jurisprudence : Ethics and Laws” is a book for

B.Pharm, D.Pharm, Pharm D students. It covers syllabus according to PCI. Its having advantage for a quick look preparation for exam with important question sets.

The first to use Judith Butler's work as a reading of how the legal subject is formed, this book traces how Butler comes to the themes of ethics, law and politics analyzing their interrelation and explaining how they relate to Butler's question of how people can have more liveable and viable lives. Acknowledging the potency and influence of Butler's 'concept' of gender as process, which occupies a well developed and well discussed position in current literature, Elena Loizidou argues that the possibility of people having more liveable and viable lives is articulated by Butler within the parameters of a sustained agonistic relationship between the three spheres of ethics, law and politics. Suggesting that Butler's rounded understanding of the interrelationship of these three spheres will enable critical legal scholarship, as well as critical theory more generally, to consider how the question of life's unsustainable conditions can be rethought and redressed, this book is a key read for all students of legal ethics, political philosophy and social theory.

First published in 1998, this volume considers the Nuremberg Code in light of new ethical grey areas which have become evident due to recent scientific

advancements, particularly the questions of DNA and cloning. The contributors reflect in 26 articles on the impact of the Code, events which prompted it including Japan, and more recent ethical issues raised. The book contains the results of two European/American preparatory workshops for the First World Conference on Ethics Codes in Medicine and Biotechnology (October 1997 Freiburg, Germany) supported by the leading national institutions in the field. It aims to stimulate research about codes, the effects of codification and other forms of implementing ethics. It breaks new ground with interdisciplinary and international discourse on the subject, emphasising the need for a complete collection of codes for systematic research and evaluation and filling the gap in literature on the subject to date.
