It is simple to install ceramic tile using modern fast-setting mortars, sealants and grout. No matter what style or size, the principles remain the same. You will need a hammer and chalk line to mark the area. A sabersaw with a carbide blade (helpful but unnecessary), rubber gloves and tile grout sealer are also needed. To force grout into the joints of ceramic tiles, you will need an edging cap, two outside corner edge caps, and a paint stir stick. A grooved trowel and tile nippers as well as a tile cutter can be rented or purchased. Take a look at the walls. You must inspect the walls for any loose plaster, dust or peeling paint. Refer to the mastic instructions. A primer may be required for new plaster or unfinished drywall. An acrylic grout additive is a good choice if you are concerned about adhesion. Premixed with Portland

cement grout and silicone, the additive aids in adhesion. It is stable in freezing and thawing, so it can be used outdoors. This makes it ideal for garage or deck projects. This additive aids in grout color retention and resistance to stains. This grout is what fast-food restaurants use for their floors. Acrylic caulks can be made to match paint colors or tile. Acrylic latex grout can be used in small spaces. Acrylic grout is suitable for gaps less than one eighth inch (roughly one-half centimeter). read on to understand the BASIC GUIDE TO INSTALL CERAMIC AND ACRYLIC TILE
