"This book presents the histories of the major North American shortwave clubs and reviews the professional and listener-generated shortwave literature of the era. It also covers the DX programs and other listening fare to which shortwave listeners were most attracted and the QSL-cards they sought as confirmation of their reception."--Provided by publisher. On the sunny shores of Barbados, a young couple struggles to understand, having given up on trying to define what they are. It's a tough task made tougher by the fact that everybody else seems sure they have them figured out and neatly boxed away. How do they move on from pasts that haunt them and show the world their true selves if they haven't figured out who or what that is yet. In a world of labels; "gay," "straight," "single," "couple," and on and on, Table for Tu is an at times humorous but oddly believable exploration of identity, connection and that thing called love.

Imagine the extreme south of Cornwall a hundred years ago when it was a remote area with most people earning a living from farming and fishing. Into that region there arrive two teams which set up buildings on the cliff tops alongside which they erect tall masts from the heights of which run wires to the buildings. The leader of these teams is destined to become world famous and one day to be awarded a Nobel Prize; he is Guglielmo Marconi and he is setting up two wireless stations to further the development and applications of his equipment.

A shortwave radio, without use of satellites, will receive commercial free foreign government supported English language radio programs from thousands of miles away! Shortwave radios can be built at home in a time period of a few hours to a few weeks. This book contains over one hundred illustrations. Written for both the expert and the novice, it provides information for understanding how the radios work, for obtaining the necessary parts, and for constructing the radios. Shortwave radios were first developed in the 1930s and new designs can be built to resemble radios of that era.

Incidents involving rescue from road vehicles are dramatically increasing in frequency. There are some 3500 deaths on the road each year, with 35,000 serious injuries. Modern motor vehicles are becoming safer for occupants, due to advancement in technology, so persons are more likely to survive high impact speeds, but are also more likely to become entrapped. The Fire and Rescue Service, as the primary rescue service, requires national guidance to ensure a similar standard of response anywhere in the UK. This manual is designed to highlight current best practice with regard to vehicle rescue techniques and first responder trauma care. Each chapter forms an independent reference source, but the publication as a whole forms a complete guide. Chapters cover: vehicle design and construction; dealing with incidents; safety procedures; operational procedures; extrication equipment; medical considerations and trauma care; Integrated Personal Development System (I.P.D.S.). Appendices cover: Highways Agency/Fire and Rescue Service memorandum of understanding; training and general information; and emergency services personnel (ESP) aide mmoire. The CD-ROM, "Vehicle extrication techniques", is a multi media guide to rescue tool handling and extrication techniques.
